

PRIYANGSHU NATH

FULLSTACK DEVELOPER | BUSINESS AUTOMATION

Guwahati, Assam, India · +91 86388 30682 · priyangshunath190@gmail.com

Portfolio: opiius.github.io/portfolio · GitHub: github.com/OPIIUS

SUMMARY

Self-taught fullstack developer who ships. I build production web applications with Next.js, React and Node, and write Python automation that removes manual work from small businesses — lead capture, follow-up chasing, WhatsApp enquiry routing and scheduled reporting. Several projects run live, including a site in daily use by a local contractor. I own builds end to end: requirements, code, deployment, handover.

TECHNICAL SKILLS

Frontend	Next.js 14, React, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3, responsive & mobile-first UI
Backend & Data	Node.js, Python, REST APIs, Supabase, Prisma, PostgreSQL, SQLite
Automation	Python scripting, job scheduling & retries, web scraping, data cleaning, WhatsApp Business links, report generation, ffmpeg pipelines
Mobile	Capacitor (Android builds), Kotlin + Jetpack Compose, CameraX, PWAs
3D & Visual	Three.js, React Three Fiber, WebGL, GLB/gITF viewers, Blender
Tooling	Git & GitHub, Netlify, GitHub Pages, Vercel, Figma, CI-ready static exports

EXPERIENCE

Freelance Fullstack & Automation Developer

Guwahati, Assam · 2026 – Present

- Built and deployed a customer-ordering website for a borewell and piling contractor; enquiries route straight to the owner's WhatsApp with a generated order code, replacing a word-of-mouth phone number as the only point of contact.
- Wrote an enquiry-tracking dashboard in pure-stdlib Python that logs every enquiry, values it, and surfaces the ones going cold first — targeting the follow-ups small businesses lose revenue to.
- Shipped a multi-role SaaS product (creator / brand / admin dashboards, marketplace, Supabase auth) as a static Next.js export with a mock-data fallback so it demos without a backend.
- Delivered an interior-design marketplace as both a 7-page desktop site and a 10-screen mobile app, with 360° GLB room viewers running in-browser with no plugin or install.
- Built a colour-verification pipeline that downloads product images and extracts their true dominant colour, producing a catalogue of 1,022 verified products behind a Next.js storefront packaged as an Android APK.
- Automated repeated work with a Python scheduler handling schedules, retries, logging and persistent state.

SELECTED PROJECTS — all links live

A.S Borewell — client site, WhatsApp ordering · HTML/CSS/JS, Netlify

asborewell.netlify.app — app-style 5-tab site, service catalogue, tracked enquiry codes, one-tap call and WhatsApp, installable on Android.

OPIUS — interior design marketplace · JavaScript, Three.js, GLB viewers

opius-guwahati.netlify.app — browse a finished room and buy every product in it; 360° 3D room inspection, cart and checkout, plus a separate mobile app build.

KAZU — restaurant & live noodle bar · responsive video-first site

kazughy.punk69cyber.workers.dev — brand storytelling, menu discovery, live-teppanyaki video sections and direct action links.

RISHIBLAZE — 3D visualisation portfolio · Next.js, React Three Fiber

rishiblaze-02u35.netlify.app — cinematic archviz portfolio with responsive galleries and modular project sections.

COLOUR — shop-by-colour discovery app · Next.js, Python pipeline, Capacitor

1,022 colour-verified products; automated research → import → colour-extraction pipeline; shipped to web and as an Android APK.

Contact Centre Platform — multi-tenant AI voice & chat SaaS · Node, PostgreSQL

White-label tenant isolation, 243 passing tests, documented architecture, security model and threat model.

EDUCATION

Secondary School Certificate (Class 10)

Assam, India

No formal computer-science education. Everything in this resume — Next.js, React, TypeScript, Node, Python, Android and WebGL — was learned by building and shipping the projects listed above, several of which are live in production today. Every link works; the code is the qualification.
